

Production Log Analysis — June 6, 2026

Vyapar AI Employee — HONS Pilot

Log window: 2026-06-06 16:45 – 17:24 UTC | User: 2071979418

Deploy: LIVE | Verdict: PARTIAL Sales fixes OK; support routing broken

1. Executive Summary

P0 sales/pricing fixes partially working. New critical gap: **support and escalation messages route to general_knowledge**, causing the bot to repeat the same contact numbers even when the user says calls were not answered. User frustration visible in Telegram screenshots ("dimag prayog gara").

2. Session Timeline (June 6 Logs)

Time (UTC)	User Message	Intent	Turn	Status
16:45:57	Net gayo ta batti chhaina hamro tira.	general	general_knowledge	Should be support
17:06:59	Tapaile dinu bhaeko num ma call received bhaena ta?	general	general_knowledge	Should be support/escalation
17:07:50	Tala dieko num ma ta call gareko ta?	general	general_knowledge	Duplicate overlap=1.00
17:09:55	Tapai alik paudhik dimag... call uthena ma ke garaun?	general	general_knowledge	Should be escalation

3. What Is Working

Check	Log Evidence
Deploy / webhook	APP_STARTUP, TELEGRAM_WEBHOOK_SET, service live
Fresh session state	phone_collected=False, pitch_count=0, keys=[]
Language lock	language=nepali, locked=True
No fallback spam	No RESPONSE_VALIDATOR_FALLBACK in session
Validator pass	is_valid=True on all turns

4. Critical Bugs (June 6)

BUG-1: Support intent not detected Messages about outage, no electricity, call not answered → intent=general, turn=general_knowledge. Missing patterns: net gayo, batti chhaina, call uthena, call received bhaena, call gare.
BUG-2: Contact number repeat loop Log: duplicate_response overlap=1.00 — bot sent identical reply with same +977-1-4541063 / toll-free again. User explicitly said number did not work; bot repeated same numbers (see Telegram screenshot 10:52–10:54 PM).
BUG-3: No escalation path Frustrated user ("dimag prayog gara") still gets generic troubleshooting + same contact list instead of escalation to human team.

5. Screenshot Issues (June 5–6)

Issue	Example	Severity
Language/script flip	"Nepali ma bhannus" → Roman, Devanagari, Roman mixed	P1
False script claim	Bot says "Roman ma lekhna sakdina" while using Roman	P1
Generic chitchat	"Garma dherai chha" → hydration tips (not ISP-specific)	P2
Contact loop	Call uthena → same number repeated 3 times	P0
Info → sales attach	Internet barema sodhda → 100 Mbps pitch at end	P1
FTTH / company info	Correct FTTH answer, contact details	OK

6. Root Cause Chain

```
User: "call uthena, ke garaun?"
↓
detect_intent() → general      [no support patterns]
↓
route_turn() → general_knowledge
↓
LLM → same phone numbers + generic tips
↓
duplicate_response overlap=1.00 [sanitized but still sent]
↓
User: "dimag prayog gara"      [frustration]
```

7. Recommended Fixes (Next Deploy)

P	Fix	File(s)
P0	Support patterns: net gayo, batti chhaina, call uthena, call received bhaena	intent_engine.py, turn_router.py
P0	Unreachable-contact → turn=escalation (no same number repeat)	turn_router.py, response_validator.py
P0	Lead continuation: Pakka bhayo, Paisa kati, Okay → sales/follow_up	turn_router.py
P1	Script lock: roman_nepali vs devanagari preference	language_lock.py, turn_router.py
P1	secondary router → unknown_product (not sales pitch)	turn_router.py
P2	Chitchat boundary: redirect non-ISP topics politely	prompts.py

8. Expected Logs After Fix

```
INTENT_DETECTED intent=support text=Net gayo ta batti chhaina
TURN_ROUTED turn=support reason=outage_report
INTENT_DETECTED intent=support text=call uthena ma ke garaun
TURN_ROUTED turn=escalation reason=contact_unreachable
RESPONSE_VALIDATED turn=escalation is_valid=True (no duplicate contact)
```

9. Security Reminder

Bot token visible in Render logs. Revoke via @BotFather → update Render env → redeploy.

10. Test Script (After Fix)

1. Net gayo ta batti chhaina hamro tira → support reply
2. Tapaile dinu bhaeko num ma call received bhaena → escalation (not same number spam)
3. Pakka bhayo, jadaan pathaidinus → sales (qualified lead)
4. Nepali ma bhannus na → language_request, consistent script
5. secondary router kati parchha → unknown_product
