

Render Log Bug Analysis Report

Vyapar AI Employee — Production Telegram Session

Report date: June 4, 2026 | **Source:** Render dashboard logs (Vyapar-AI-Agent)

Test window: June 4, 03:23 AM – 03:31 AM | **User ID:** 2071979418 | **Tenant:** hons

Verdict: 7 BUGS FOUND 3 core bugs explain all log failures

Executive summary (नेपाली): Render logs ma dekhine sabai failures 3 core bugs bata aaunchhan: (1) "hi" substring le Nepali shabd lai greeting samjhinchha, (2) Telegram user_id lai phone jastai save gari phone_collected=True hunchha, (3) Response validator le valid identity/meta jawaf pani reject garera generic fallback dincha. Yo 3 garepachhi dherai improve hunchha.

1. Log → Bug Quick Map

Log Evidence	Bug ID	Severity
phone_collected=True (no phone in user text)	BUG-1	P0
intent=greeting on "chahiyo", "mahinako", "bujhina"	BUG-2	P0
turn=greeting on "3 Mahinako kati ho?"	BUG-2	P0
turn=general_knowledge on "100 Mbps rakhchhu"	BUG-3	P1
catalog_in_non_sales_turn on company_info	BUG-4	P0
turn=general_knowledge on "Nepali ma bhannus na"	BUG-5	P1
has_location=False on "Banepama jodnu chha"	BUG-6	P1
duplicate_response overlap=0.73	BUG-7	P2

2. Conversation Timeline (From Logs)

Time	User Message	Intent (Wrong)	Turn	Issue
03:23	bujhina maile	greeting	greeting	Should be correction
03:24	Net jodnu thiyo bhaneko maile	greeting	greeting	Should be buying_intent
03:24	Ghar ma jodne ho mero	general	general_knowledge	"Jodne" name reject (OK)
03:25	Ke janakari?	general	general_knowledge	duplicate_response fallback
03:25	Net jodnu chha kya mero gharama	buying_intent	sales	phone_collected=True (BUG-1)
03:26	3 Mahinako kati ho?	greeting	greeting	Should be pricing (BUG-2)
03:26	Nepali ma bhannus na	general	general_knowledge	Should be language_request
03:27	Banepama jodnu chha	buying_intent	sales	has_location=False (BUG-6)
03:28	500 Mbps chahiyo	greeting	greeting	Should be sales (BUG-2+3)
03:29	Tapaiko naam ke ho?	general	company_info	catalog_in_non_sales_turn
03:30	100 Mbps rakhchhu ma	general	general_knowledge	Should be sales (BUG-3)
03:31	Haina hola	general	correction	catalog_in_non_sales_turn

3. Bug Details

BUG-1 P0 — phone_collected=True Without Real Phone

Log: SESSION_STATE_SYNCED phone_collected=False → LEAD_SIGNALS → phone_collected=True

User text: "Net jodnu chha kya mero gharama" (no phone number)

Root cause: Telegram user_id is stored as contact_value, then treated as phone.

```
// lead_extractor.py - detect_contact_method()
if channel == "telegram" and user_id:
    return "telegram", str(user_id) // ← 2071979418 stored as contact

// session_state_manager.py - sync_session_state()
phone = lead.contact_value // ← telegram ID treated as phone
if phone:
    state.phone_collected = True
```

Effect: Bot stops asking for phone. repeated_phone_request warnings. Real lead qualification broken.

Fix: Only set phone_collected=True when a valid Nepal mobile (98/97xxxxxxx) is extracted. Telegram user_id ≠ phone.

BUG-2 P0 — "hi" Substring False Greeting

Log: INTENT_DETECTED intent=greeting on messages containing Nepali words with "hi" inside.

```
// intent_engine.py - detect_intent()
if any(word in t for word in ["hello", "hi", "namaste", ...]):
    return "greeting"

// False positives:
"hi" in "chahiyo" → True (500 Mbps chahiyo)
"hi" in "mahinako" → True (3 Mahinako kati ho?)
"hi" in "bujhina" → True (bujhina maile)
"hi" in "thiyo" → True (jodnu thiyo)
```

Effect: Pricing, buying, correction all routed to turn=greeting with suppress_catalog=True → validator fails → generic fallback.

Fix: Use word-boundary regex: r"\b(?:hello|hi|hey|namaste|namaskar)\b"

BUG-3 P1 — Incomplete Buying Intent Patterns

Log: Clear purchase intent not detected as buying/sales.

```
Missing patterns in intent_engine.py / lead_extractor.py:
"jodnu thiyo" → jodn[u]? chh?[au] only (not thiyo)
"500 Mbps chahiyo" → no chahiyo pattern
"100 Mbps rakhchhu" → no rakhchhu/linu pattern
"net jodnu chha kya" → partial match only
```

Fix: Add patterns: chahiy[oō], thiyo, rakhchhu, \d+\s*mbps, jodnu\s+chha

BUG-4 P0 — Validator Rejects Valid Direct Answers

Log: RESPONSE_VALIDATED is_valid=False issues=['catalog_in_non_sales_turn'] on company_info, correction, general_knowledge turns.

```
// turn_router.py - _ai_identity_answer()
"Ma {name} ko AI employee hu. Tapailai internet package, coverage..."

// response_validator.py - PITCH_PATTERNS
r"internet\s+package" ← matches identity answer itself!

// ai_employee_engine.py - direct answers also go through _finalize_reply()
→ validator rejects → build_fallback_reply() → generic spam
```

Effect: "Tapaiko naam ke ho?" → valid identity answer rejected → "confirmed jankari chaina".

Fix: Skip catalog check for `direct_answer` turns, OR remove "internet package" from `PITCH_PATTERNS` for `company_info/meta` turns, OR use softer patterns (require Mbps/NPR digits).

BUG-5 P1 — Language Request Route Miss

Log: "Nepali ma bhannus na" → `turn=general_knowledge` (not `language_request`)

```
// turn_router.py LANGUAGE_REQUEST_PATTERNS
r"nepali\s+(?:ma)\s+(?:type|lakh|bol|kura)" ← missing bhannus/bhannu

// language_lock.py NEPALI_LOCK_REQUEST (has bhan but turn_router doesn't)
r"nepali\s+(?:ma)\s+(?:type|lakh|bol|bhan)"
```

Fix: Add `bhannu|bhannus|bol` to `turn_router LANGUAGE_REQUEST_PATTERNS`. Sync with `language_lock.py`.

BUG-6 P1 — Location Extract Fail (Banepa)

Log: "Banepama jodnu chha" → `has_location=False`, all location signals None.

```
// memory_extractor.py CITY_ALIASES - Banepa NOT listed
// lead_extractor.py extract_location()
r"\b([A-Za-z]+\s+ma\b)" ← requires space before "ma"
"Banepama" (one word) → no match
```

Fix: Add `banepa` to `CITY_ALIASES`. Add pattern `banepa\s*ma`. Handle common typo "Banepama".

BUG-7 P2 — Fallback Duplicate Loop

Log: `duplicate_response overlap=0.73` → `RESPONSE_VALIDATOR_FALLBACK` → same generic text again.

Validator fail → `build_fallback_reply("general_knowledge")` → "Yo barema ma sanga confirmed jankari chaina..." → overlap 0.73 with previous fallback → fail again → User: "Ke janakari?" (What information?)

Fix: Make fallback replies turn-specific and unique. Lower overlap threshold for fallbacks, OR skip duplicate check when already in fallback path.

4. Failure Chain Diagram

User: "500 Mbps chahiyo" ↓ detect_intent() → "greeting" [BUG-2: "hi" in "chahiyo"] ↓ route_turn() → turn=greeting, suppress_catalog=True ↓ LLM generates reply with Mbps/package info ↓ validate_response() → catalog_in_non_sales_turn [BUG-4] ↓ build_fallback_reply() → generic "confirmed jankari chaina" ↓ validate again → duplicate_response overlap=0.73 [BUG-7] ↓ User confused: "Ke janakari?"

5. Fix Priority & Files

Priority	Fix	File(s)
P0	Word-boundary greeting detection	intent_engine.py
P0	Telegram user_id ≠ phone_collected	lead_extractor.py , session_state_manager.py
P0	Validator: skip catalog check on direct_answer	response_validator.py , ai_employee_engine.py
P1	Buying patterns: chahiyo, thiyo, rakhchhu, mbps	intent_engine.py , lead_extractor.py
P1	Language request: bhannus/bhannu pattern	turn_router.py
P1	Banepa in CITY_ALIASES + banepama typo	memory_extractor.py , lead_extractor.py
P2	Unique fallback text per turn	response_validator.py

6. Re-Test After Fix

- bujhina maile → correction turn (not greeting)
- Net jodnu thiyo bhaneko maile → buying_intent / sales
- 3 Mahinako kati ho? → pricing turn
- 500 Mbps chahiyo → sales turn (phone_collected still False)
- Nepali ma bhannus na → language_request + locked=True
- Banepama jodnu chha → has_location=True (Banepa)
- Tapaiko naam ke ho? → company_info direct answer (no validator reject)
- 100 Mbps rakhchhu ma → sales turn

7. Expected Log Lines After Fix

```
INTENT_DETECTED intent=buying_intent      (not greeting on chahiyo)
TURN_ROUTED turn=sales                    (not greeting on mbps chahiyo)
SESSION_STATE_SYNCED phone_collected=False (until real 98xxxxxxx)
RESPONSE_VALIDATED is_valid=True           (company_info, no catalog issue)
LANGUAGE_LOCK_APPLIED locked=True          (after Nepali ma bhannus)
TURN_ROUTED turn=language_request          (not general_knowledge)
```
