

Telegram Re-Test Status Report

Vyapar AI Employee — HONS Pilot

Report date: June 4, 2026 | **Test window:** June 3, 2026 (7:32 PM – 8:35 PM)

Channel: Telegram | **User:** Khemraj Adhikari | **Question:** "Samasya ajhai ustai chha ta?"

Verdict: PARTIALLY FIXED NOT FULLY RESOLVED

Short answer (नेपाली): Naam save ra privacy jawaf **thik** bhayo. Tara language lock, generic fallback spam, meta/follow-up routing, ra English session ma Nepali fallback — **ajhai fail** cha. Code ma fix gariyo; production ma deploy nagari test garyo bhane ustai dekhincha.

1. Executive Summary

Category	Status	Notes
Name memory	PASS	"Khemraj Adhikari" correctly saved; no 300 Mbps contamination
Privacy / meta (data selling)	PASS	Reasonable Nepali reply using saved name
Package sales (English)	PASS	100 Mbps package correctly quoted in English
Follow-up ("Dinus na ta")	FAIL	Generic "confirmed jankari chaina" instead of helpful follow-up
Meta ("Kasto kaaryakram chha?")	FAIL	Same generic fallback; role not explained
Language lock (Okay / Hello)	FAIL	Nepali session → English after neutral words
Meta language questions	FAIL	Claims "English letters ma bolna sakdina" while using Romanized Nepali
500 Mbps objection (English)	FAIL	English user → Nepali fallback "Tapai ko concern bujhe"

2. Screenshot Conversation Timeline

Session A — Nepali (7:32 – 7:39 PM)

User: Namaskar

Bot: Namaskar! ... kehi vishesh jankari dina sakchu?

User: Dinus na ta

Bot: **Yo barema ma sanga confirmed jankari chaina...**

User: Mero naam Khemraj Adhikari ho tapai ko?

Bot: **Dhanyabad Khemraj Adhikari! Naam save bhayo.**

User: Mero naam kina save garnu... bechnu hunchha kya?

Bot: **Naam save gareko ho, tara collect/bechne karyakram chaina.**

User: Kasto kaaryakram chha ta?

Bot: **Yo barema confirmed jankari chaina...**

User: Okay

Bot: **If you have any questions... (English)**

Session B — Meta language (7:46 – 7:56 PM)

User: Tapai jina nepali bolera english letters ma translate garnu bhayeko?

Bot: **Ma Nepali ma matra bolchu, English letters ma translate garna sakdina.**

User: Hello

Bot: **Hello! Welcome to Himalayan Online Service... (full English)**

Session C — English request (8:31 – 8:35 PM)

User: English ma kura garam na priya / Hello my dear

Bot: Sure! How can I assist... then **I do not have confirmed information...**

User: Share your packages

Bot: **100 Mbps Internet Package NPR 10,000...**

User: I need 500 mbps

Bot: **Tapai ko concern bujhe. Ma confirmed detail matra bhanchhu. (Nepali)**

3. Root Cause Analysis (Remaining Failures)

RC-1: Language lock wiped before DB save

`resolve_session_language()` sets `language_locked=True` in memory.
`sync_session_state()` reloads from DB where `language_locked=False` → lock lost.
Effect: "Okay", "Hello", emoji flip Nepali ↔ English every turn.
Files: `language_lock.py`, `session_state_manager.py`, `ai_employee_engine.py`

RC-2: Missing turn routes for follow-up and meta

"Dinus na ta" (affirmative after bot offer) and "Kasto kaaryakram chha?" (role question) fall through to `general_knowledge` → `build_fallback_reply()` spam.
Files: `turn_router.py`, `response_validator.py`

RC-3: Objection fallback ignores session language

English session + unknown product (500 Mbps) → validator returns Nepali objection text.
File: `response_validator.py` — `build_fallback_reply()`

RC-4: Meta language handler contradicts output

Bot outputs Romanized Nepali (Latin script) but claims it cannot use "English letters".
File: `turn_router.py` — `_meta_answer()` needs script/language distinction.

4. Fixes Applied (Local Workspace — June 4)

FIX-1: Persist language lock immediately

After `resolve_session_language()`, call `save_session_state(session)` before `sync_session_state()`. Pass `language_locked` into sync to prevent wipe.
File: `ai_employee_engine.py`

FIX-2: Neutral words do not flip language

Added `NEUTRAL_WORDS` (okay, hello, hi, namaste) — sticky lock preserved when locked.
Added pattern: `english ma kura garam` → force English lock.
File: `language_lock.py`

FIX-3: New turn types

`follow_up` — affirmative replies ("Dinus na ta", "Thik cha")
`meta` — role, privacy, language/script questions
Files: `turn_router.py`, `ai_employee_engine.py` (`NON_SALES_TURNS`, turn hints)

FIX-4: Turn-specific fallbacks

Added Nepali + English fallbacks for `meta` and `follow_up` instead of generic "confirmed jankari chaina".
Fixed objection fallback to respect session language.
File: `response_validator.py`

FIX-5: Sales mode blocked on non-sales turns

`NON_SALES_TURNS` frozenset prevents warm-lead sales injection on memory/meta/general turns.
File: `ai_employee_engine.py`

5. Expected Behavior After Deploy

User Message	Expected Reply	Turn Route
Dinus na ta	"Tapai lai ke chahiyo? Package, coverage, price, wa support?"	follow_up
Kasto kaaryakram chha ta?	"Ma AI employee hu. Internet package, coverage, support..."	meta
Okay (Nepali session)	Stays Nepali — no English switch	language_lock sticky

English ma kura garam	All replies in English until user switches	language_request
I need 500 mbps (English)	English: "No confirmed price for that item..."	unknown_product / objection
Mero naam Khemraj Adhikari ho	"Naam save bhayo" — no Mbps mention	memory_write

6. Deploy Checklist

1. **Push all P0 files to GitHub** — verify repo has: `turn_router.py`, `language_lock.py`, `response_validator.py`, `session_state_manager.py`, `memory_validator.py`
2. **Deploy atomically to Render** — partial deploy caused import errors previously
3. **Run DB migration** on Postgres:
`docs/migrations/002_language_lock_coverage.sql`
4. **Restart service** after deploy
5. **Run tests:** `python -m unittest discover -s tests -v`
6. **Re-test 8 messages** in Telegram (see Section 7)
7. **Check logs** for: `LANGUAGE_LOCK_APPLIED`, `TURN_ROUTED` `turn=follow_up|meta`

7. Re-Test Script (Telegram)

```
1. Namaskar
2. Dinus na ta
3. Mero naam Khemraj Adhikari ho
4. Kasto kaaryakram chha ta?
5. Okay
6. English ma kura garam na
7. Share your packages → I need 500 mbps
8. Tapai english letters ma kura kina garnubhayo?
```

8. Changed Files (This Fix Batch)

```
ai_employee_engine.py      - save language_locked; NON_SALES_TURNS; turn hints
language_lock.py           - NEUTRAL_WORDS; sticky lock; english ma kura pattern
turn_router.py             - follow_up, meta routes; _meta_answer()
response_validator.py       - meta/follow_up fallbacks; language-aware objection
session_state_manager.py   - language_locked on sync
intent_engine.py           - general_knowledge before pricing
memory_validator.py        - name-only validation
docs/migrations/002_language_lock_coverage.sql
```

9. Answer to "Samasya ajhai ustai chha ta?"

Aspect	Same as before?
Name save / memory corruption	NO — improved
Language flip on Okay/Hello	YES — until deploy
Generic fallback spam	YES — until deploy
English → Nepali on 500 Mbps	YES — until deploy
Meta language contradiction	YES — partial fix in code

Conclusion: Problem is *partially* the same. Core P0 architecture exists; critical bugs are patched locally. Production will show same failures until full deploy + DB migration + restart.
