

Recent Test Report — Vyapar AI (HONS)

Telegram Production Test Session

Date: June 3, 2026 | **Channel:** Telegram | **Tenant:** HONS ISP

Session scope: ~30+ messages — Banepa connection, packages, negotiation, escalation, FAQ

Verdict: NOT PRODUCTION READY MVP / Demo Level 2.5

Executive summary: Pipeline is running and catalog prices are often correct, but the bot cannot behave as a reliable AI employee. Memory gaps, repetitive sales pitches, wrong answers to direct questions, and language inconsistency dominate the session.

One-line: Bot can *read* company data; it cannot *converse* like an employee under real Nepali Telegram usage.

1. Overall Results

Area	Result
Pipeline / responses	Pass
Product facts (100/150/200 Mbps catalog)	Partial
Lead capture (name / phone)	Partial
Sales employee UX	Fail
Production-ready	Fail

2. Tests Passed

#	Test	Result
1	Banepa ma naya jodanu → asks name, phone, speed	Pass
2	Mero naam Khemraj Adhikari remembered	Pass
3	200 Mbps ko kati? → NPR 15,000 / 13 months	Pass
4	2+2-0 kati? → 4	Pass
5	15000 ma 12 mahina → correctly says 13 months only	Pass
6	Tapai HONS ko sahayak? → company + contact	Pass
7	Subisu sasto competitor mention + own offer	Partial

3. Failures by Category

A. Memory & State — Critical

Symptom	Example from test
Phone given, asked again	Number maile aghi deko → “agadi paeKO chaina”
Double reply same timestamp	11:46 — Nepali + English Hello both sent
Hallucinated phone	Bot uses 9898989898 when user did not provide it
Wrong memory field	Coaching message → saved as AI Employee Platform business type

Cause: No session state; memory writes without validation; phone_collected not tracked.

B. Repetitive Sales Loop — Critical

Same block repeated across many turns:

100 Mbps NPR 10,000 ... phone/WhatsApp dinuhos

Seen on: competitor questions, discount, Facebook 500 Mbps claim, “ali ramro bujha”, senior escalation, clarifications.

Cause: Sales mode stuck ON; no response validator; CTA in every prompt.

C. Wrong or Incomplete Answers — High

User asked	Bot did
Kun net / company naam?	Package pitch or full catalog dump
Tapaiko naam ke ho?	“Himalayan Online Service ko pratinidhi” — awkward identity
Facebook 500 Mbps 6 month NPR 6000	“Thaha chaina” + same 200 Mbps pitch repeated
Nepal ma kati internet company?	Competitor list + unsolicited 500 Mbps mention
Discount 100 Mbps 1 year?	“Discount chaina” + repeat options text
Senior le sodhera 500 Mbps bhannus	Contact given + asks phone again same turn

D. Language & Tone — High

- Nepali ↔ English mixed in same session (Ghari Nepali ghari angreji)
- Robotic closing every turn: “Aru kura chahincha bhane puchna/sodhna saknuhunchha”
- User: Malai sikaunu bhako ki afailai? — bot lectures user instead of adapting

E. UX / Product — Medium

- Option ma click bhayena — bot sends text lists, no Telegram inline keyboard buttons
- User asks for process links / advanced employee flow — not supported

F. Escalation / Team Wording — Medium

- Senior/sodha → company contact sometimes correct
- Still asks user phone in same turn after giving office number
- Risk of “tapainko team” vs “hamro team” confusion in long threads

4. Failure Volume (Estimated)

Category	~Incidents
Repeat pitch / phone CTA	15+
Memory / phone forget	5+
Wrong question answered	8+
Language inconsistency	4+
Hallucination (phone, competitors)	3+
Meta / coaching ignored	3+
UI — no clickable options	2+

5. Root Causes (Architecture)

- No **turn router** (intro / info / sales / repair / escalate)
- No **conversation state** (phone_collected, pitch_sent, phase)
- No **response validator** (block repeat pitch, block phone re-ask)
- Single-turn LLM + long prompt → template loop
- No Telegram inline keyboards for package selection

Phase 2 deploy improved logs; this test shows **UX still fails**.

6. Priority Fix List

P	Fix	Addresses
P0	Session state: phone, name, pitch_count — no re-ask if collected	Repeat phone ask
P0	Turn router: info question → answer only, no catalog	Company name, kun net
P0	Response validator: >70% overlap → regenerate	Repeat after clarification
P1	Memory validator: block bad name/phone extraction	9898989898 hallucination
P1	Language lock: user Nepali → reply Nepali only	Mixed language
P1	Escalation: company contact OR user phone, not both	Senior sodha flow
P2	Telegram inline keyboard (100/150/200 Mbps)	Click bhayena
P2	Meta turn handler for coaching / repair	Sikaunu vs afailai

7. Retest Checklist (After P0)

- Banepa naya jodanu → name, phone, speed — no repeat ask
- Kun net ho yo? → HONS name only
- 500 Mbps Facebook → no pitch repeat; escalation script

4. Number aghi deko → bot remembers
5. Senior sodha → contact only
6. Nepali only after language complaint
7. Discount? → direct answer
8. $2+2-\emptyset$ → 4
9. Subisu sasto → competitor handling
10. Package options → inline buttons (P2)

8. Maturity Rating

Level 2–2.5 (Functional MVP) — not ready for paying HONS customers until P0 fixes ship.
